# Application Submission System & Interface for Submission Tracking (ASSIST) Version 2.14.1 Release Notes

## New Features

### ***Additional Activity Codes for Single Projects Supported in ASSIST***

Applicants can use ASSIST to submit single-project applications for additional Training and other Research activities. Refer to the [Target Timeline for Single-Project ASSIST Support](#) for the complete list of activity codes.

### ***Subaward Form Download/Upload Available for Multi-projects***

The option to download, complete offline, and upload subaward budget forms in ASSIST is now available for multi-project applications. Prior to this release, this option was only available for single-project applications.

Refer to the [ASSIST Online Help](#) for steps on completing a subaward form offline.

## Fixes

### ***Corrected SO Signature on Copy Application Feature***

Previously, the SO Signature and signature date appeared to copy over from one application to another when the *Copy Application* feature was used. The copied application's information appeared on the screen, but the data was never copied to the new application.

This issue has been fixed.
